We will now give some specimens of the investigations and conclusions of Spitzer. In Arts. 250 and 251 we have shewn how in general we may distinguish between the maximum and minimum of  $\int V dx$ , where  $\int V$  involves  $x$ ,  $y$ , and  $y'$ . Now suppose for a particular case that  $r^2 F_{ps} = 0$ , then, excluding the integrated terms, the value of  $\int$ , on page 271 will take the form  $\int V dV$ . Thus for a maximum or minimum it is necessary that  $dV/dx$  should be respectively constantly negative or constantly positive throughout the limits of the integration.  $dV$  Since  $t_j = 0$ , it is obvious that  $F$  must be of the form,...
