By Astronomical Society of the Pacific

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1895 Excerpt: .Kilauea and Mauna Loa, however, show that two adjoining volcanoes can be in activity simultaneously. The lunar formations described had the following characteristics: See Holdbn, Publications A. S. P., Vol. III, page 250. tSee Becker, geometrical form of volcanic cones, and the elastic limit of lava, j4mir.Jour. Set., October, 1885. First.--Their circumferences were circular, elliptic, or irregularly elliptic. Second.--They had plainly visible walls, more or less flat on the outside, and steep inside. Third.--They had well-defined, level, or slightly curved bottoms. Only to these the name of crater should be applied. They can be compared with terrestrial volcanoes of the Hawaiian type, and differ from the latter: First.--In regard to their greater dimensions. Second.--That their bottoms are considerably below the average level of immediate surroundings. Third.--By the rarity of internal ruptures. The surface of the Moon shows, however, many other forms which differ materially from those...
