

## New methods and applications in time-resolved X-ray absorption spectroscopy

Filesize: 8.05 MB

### ***Reviews***

*This written publication is fantastic. This can be for anyone who statte that there had not been a well worth reading through. I realized this pdf from my i and dad recommended this publication to discover.*

## NEW METHODS AND APPLICATIONS IN TIME-RESOLVED X-RAY ABSORPTION SPECTROSCOPY

Shaker Verlag Mrz 2012, 2012. Buch. Book Condition: Neu. 211x149x15 mm. Neuware - Time-resolved investigations of condensed matter on an atomic scale level are nowadays indispensable to gain insights in the complex mechanisms of dynamic processes in physics and chemistry. Most of these processes take place at the surface of a metal, such as for example layer growth and corrosion phenomena or all catalytic applications. X-ray absorption spectroscopy is one of the most important investigation tools in this context. It allows resolving the local structure around a selected kind of element in the probed sample within the range of a few Angstroms by using the intense X-ray beams generated at modern synchrotron radiation sources. It is thus perfectly adapted to investigate systems with only a short range order as for example very thin layers or nanoparticles which are especially important for catalytic applications. Prerequisite for X-ray absorption spectroscopy are monochromators with perfect crystals that reflect only a certain energy determined by the incident angle. Time-resolutions of down to a few milliseconds for one spectrum are achievable with quick-scanning X-ray absorption spectroscopy (QEXAFS) using mechanics to rapidly oscillate the monochromator crystals. New technical approaches for the QEXAFS method are presented in this work as for example an angular encoder system to accurately measure the monochromator crystal angle and thus to obtain most accurate energy values for the measured spectra. The design of flexible driving mechanics is introduced and tested. The new mechanics allow arbitrarily adjusting the energy range of the spectra within few seconds leading to a more efficient application of QEXAFS and also new possible experiments. Moreover, a new fast and reliable data acquisition system is presented as well as new user-friendly data analysis software named T-REX to handle the thousands of spectra that are typically collected during each measurement....
